

CM2200 TRANSMITTER AND RECEIVER

The **Control Master®** CM2200 Transmitter and Receiver is the latest series remote control pack, designed as a replacement to the current CM2000D. The CM2200 includes a host of technical design improvements to ensure the receiver can be interfaced into the latest mobile equipment.

Features contained within the CM2200 system ensures compatibility between machine brands and reduces the hardware alterations required to machine wiring systems.

The CM2200 system incorporates a CAN / Serial / Ethernet based communications structure to provide a flexible platform to communicate with a number of other systems including the Control Master® Guidance System, Operator Station and other machine based networks.

Improved capabilities at the receiver include Liquid Crystal Display (LCD) to indicate system health and diagnostics, data logging to aid in service and repair, configurable engine monitoring and maximum gear selection.

The addition of a proportional brake output can reduce brake and driveline wear and improve brake control.

The matching **Control Master®** CM2200 CAN based operator station includes improved functional control, safety features and ergonomics. Horn, gear change, camera change and others are now available at the hands of the operator.

On site upgrades and enhancements are now available through the provision of a single version software platform.

Improved internal hardware and software checking systems for increased safety.

Part No. 7294

CM2200 Transmitter

Part No. 7297

CM2200 Receiver

FEATURES & BENEFITS

- **Control Master®** Guidance Compatible
- Machine Compatibility
- Proportional Brake Output
- Fault Logging
- Improved Radio Communications Interface
- Maximum Gear Configurable
- Improved LCD Messaging
