

DRILL REMOTE CONTROL SYSTEM (UNDERGROUND)

The **Control Master®** Drill Remote Control system is designed to allow the drill operator to work safely away from the drill face, avoiding the dangers of falling rocks, debris and hazardous fumes. From the remote control transmitter the operator can control the entire functionality of the drill and also monitor the real time processes of the drill from the remote display.

The design of the remote control unit can be engineered to meet customer requirements. Features of the remote control drill system includes Real Time monitoring of drilling pressures, speed and much more.

FEATURES & BENEFITS

- Increases safety by removing the operator from the drill face
- Improves productivity by reducing operator fatigue
- Prevents machine damaged by allowing operator to monitor vital functions on board the drill
- Improves mine working conditions
- Drill package can be customised to suit mine requirements
- Custom engineered to suit specific drill applications
- Onboard remote control function monitoring
- Capable of line of sight or teleremote operation

Part No. 8095	Underground drill transmitter
Part No. 8101	Underground drill receiver

Drill packages can be customised to suit specific client needs
