

The **Control Master®** Electrical Interface is a machine specific component that allows the operator to use standard **Control Master®** Remote Control systems across a fleet of different machines. Standardisation across a fleet of machines allows for greater integration, compatibility and safety. It also makes the supply of remote control systems much more affordable for the customer.

The **Control Master®** Electrical Interface also allows the operator to interchange between manual and remote control operations at any time.

Remote Control Technologies Pty Ltd designs and manufactures custom built electrical interfaces for most types of mining machines.
