REMOTE CONTROL WATER TRUCK FILL SYSTEM

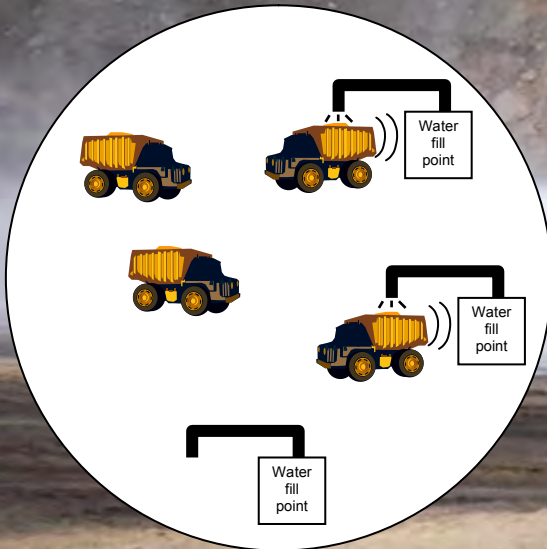

The **Control Master®** Remote Control Water Truck Fill system is designed to allow the operator to operate the site water fill systems from the cabin of the water truck via radio remote control. The system incorporates LED status indicators to inform the operator of the fill process status and also system integrity. By utilising inbuilt binary codes individual water trucks can be identified by each water fill receiver. This information can be used to log who is using each fill point, how many times and when they were filled. RCT can supply data logging equipment if required.

FEATURES & BENEFITS

- In cabin remote control
- Water filling status indicators
- Data logging capabilities
- Auto turn off
- Robust design
- No radio licence required
- Saves time and man hours
- Improves operation efficiency
- Saves water
- Reduces operator risk

Part No. 5864	Transmitter control panel 24V
Part No. 5949	Transmitter unit 24V
Part No. 5325	Receiver 24V
