

The **Control Master®** Winery Pump remote allows operators to control the manual process of transferring wine from one storage tank to another. The remote helps to improve efficiency by removing the repetitive time consuming task of turning each pump on and off. The benefit of using the remote is most evident on sites that have multiple storage tanks or pumps which are positioned some distance apart.

The winery remote control helps to improve the overall safety and productivity of the winery process by providing the operator with greater flexibility and portability whilst performing their duties. The remote provides the operator with full control over multiple pumps and the speed of each pump. Each winery pump remote can be customised to suit the operator or worksite requirements.

- ▶ Up to 100 metres working distance
- ▶ Improves occupational safety
- ▶ Reliable failsafe operation
- ▶ Complete function control even with signal congestion
- ▶ Secure radio control at all times

Complies with Australian  
& New Zealand Standards

**AS/NZS CISPR22**

**FAILSAFE  
SECURE RADIO CONTROL**

### STANDARD SYSTEM FUNCTIONS

- ▶ Pump speed adjustment
- ▶ Multiple pump control
- ▶ Emergency stop
