

The Muirhead® Industrial Service Monitor is a count down timer used to indicate when a vehicle is due for a service. It has two stages of warning, the first stage, an amber LED indicates that the service is due, the second stage, a red flashing LED indicates that the service is 10% overdue. Both stages also activate an output that can operate a visual and audible alarm. A green LED indicates when it is operating.

Example of operation is, if a vehicle requires a service every 250 hours, the unit is programmed to 250 hours. After 250 hours of operation, the amber LED activates, indicating that the service is due. 25 hours later, the red flashing LED will illuminate. This mode will continue until the unit is reset using the reset key switch.

FEATURES

- ▶ Regulates service schedules
- ▶ Monitors specific component change outs such as air filters, oil, replacement plugs etc
- ▶ Saving on service personnel & system testing
- ▶ Fully programmable
- ▶ Full test facilities
- ▶ Unit pre-programmed from factory
- ▶ Universal applications

For use on all types of machinery that require regular servicing.
