

The **Muirhead®** Water Spray Timer (Part No. 4530) allows the operator to manually adjust the water release rate, by simply turning the potentiometer on the water spray timer to the desired discharge rate. The water spray timer utilises a solenoid valve to turn the water output level on and off and has a 2-15 seconds standard timer, allowing the operator to optimise the rate of water discharged to suit their application. The water spray timer incorporates two types of water disperse modes, continuous and pulse.

FEATURES

- ▶ Fully adjustable manual potentiometer timer
- ▶ LED and switch controls

The **Muirhead®** Automatic Water Spray Controller (Part No. 2774) is an advanced automatic system designed to control the amount of water dispersed as the water truck moves. The amount of water discharged increases, decreases or stops automatically relative to the trucks ground speed. The controller has function switches and LED pilot lights to indicate when a function is on, together with a number of inbuilt water spray settings. The controller can be programmed to suit specific watering applications or site specific conditions.

FEATURES

- ▶ Fully automatic
- ▶ LED and switch controls
- ▶ Software program set up (Part No. 2774 only)
- ▶ Complete control system

BENEFITS

- ▶ Regulates water dispersion
- ▶ Reduces watering costs
- ▶ Prevents accidents resulting from over watering
- ▶ Simple to use
- ▶ Maintenance free

Part No. 4530 Water spray timer

Part No. 2774 Automatic water spray control

Test Equipment is also available to make calibration easier.
